N3B is not privy to DOE procurement actions and therefore cannot speculate. While there are always opportunities to improve, we continue to receive positive feedback from DOE regarding our performance. We are very proud of the work we have accomplished on behalf of the DOE. Although our original scope of work did not envision any TRU waste shipments until our third year, we have already made 35 TRU waste shipments off-site for permanent disposal and have about 20 more shipments certified as ready to go.

We remediated 350 legacy waste containers in FY20 alone, shipped 211,000 gallons of transition waste off-site, collaborated with Triad on the first co-mingled shipment from the Radioassay and Nondestructive Testing facility, responded quickly and effectively to the discovery of legacy waste on DP Road and continue to reduce risk to Northern New Mexico. We are actively planning or in the field on 10 Compliance Order on Consent campaigns, and have safely drilled two monitoring wells to ensure protection of the regional aquifer.

Last year we executed 100 percent of the Consent Order milestones and completed the first ever Consent Order campaign. In short, we are delivering significant value while executing the mission for the DOE and for the people of New Mexico.

We are proud of the work we have accomplished, our relationship with the community, and the workforce development programs we have created at corporate expense. We are fully committed to our partnership with DOE.
